## General

This document describes supported delivery operators (“deliveryOperator” in Orders API). Delivery operator dictates the service codes that are in use. Following delivery operators are supported: “Posti” and “Unifaun”. If “deliveryOperator” is Posti, then Posti’s service codes are used, and if “deliveryOperator” is “Unifaun” then Unifaun’s service codes are used.

As a Supplier you may need to support both operators in case your Retailers use different operators AND you use your own printing solution for address labels and EDI.

# Delivery operator: Posti

## Service codes

SERVICE CODE	Description
